BEAU CHAMP

Les Jardins

DE BEAU CHAMP

FACTSHEET

Project description

Les Jardins de Beau Champ is an agro-ecological initiative nestled within the smart city of Anahita Beau Champ in Southeast Mauritius. Developed by Alteo Group, this mixed-use development is built on the principles of being the SmartEst, GreenEst, and HealthiEst. The project dedicates 25% of its area to reserves and green spaces, including a 5-hectare working farm, which is a key feature of the first phase of development.

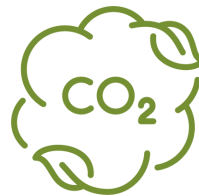

Productive Landscaping

Bio Farming Methodology

Biodiversity Conservation

Carbon Balance

Social Integration

Key Practices and Methodologies:

Permaculture: sustainable design approach that mimics natural ecosystems to create self-sufficient agricultural systems. It integrates land, resources, and people to ensure long-term ecological balance and productivity.

Agro-forestry: land management practice that combines the cultivation of trees and shrubs with crops or livestock. This integrated approach enhances biodiversity, improves soil health, and increases agricultural productivity and sustainability.

Circular Economy: an economic system aimed at eliminating waste and the continual use of resources. It employs reuse, sharing, repair, refurbishment, remanufacturing, and recycling to create a closed-loop system, minimizing the use of resource inputs and the creation of waste, pollution, and carbon emissions.

Carbon Balance

Les Jardins de Beau Champ actively works to reduce carbon emissions and enhance carbon capture through various initiatives, including the implementation of carbon offset programs to ensure a sustainable future.

Heritage Preservation

The project protects and promotes cultural and natural heritage, including endemic trees and fruit species, integrating heritage elements into the landscape design to preserve the region's unique identity.

Education

Educational opportunities related to sustainable farming and environmental conservation are provided, engaging schools and educational institutions to foster environmental awareness and knowledge.

Tourism

Eco-tourism is attracted through sustainable and visually appealing landscapes, with tourism activities highlighting the project's ecological initiatives, making it a desirable destination for nature enthusiasts.

Biodiversity

Les Jardins de Beau Champ emphasizes the conservation of mangroves and endemic species, enhancing local ecosystem resilience through dedicated preservation efforts.

Environmental and Social Benefits

The project fosters eco-resilience and sustainability through soil regeneration and regional production. It also enhances food security and community engagement via training programs. These efforts create a resilient, cohesive community and a thriving, sustainable ecosystem.

Soil and Ecosystem Regeneration

Enhances soil and ecosystem health through composting, cover cropping, crop rotation, and reduced tillage. The project also reintroduces native plants, practices agroforestry, manages water sustainably, and conserves habitats, ensuring long-term productivity and biodiversity.

Landscaping Production

By promoting social cohesion through shared agricultural spaces and implementing short circuit distribution, the project supports the local economy and fosters a sense of community.

Social and Environmental Impact:

Social: empowerment of the local community through training and participative development processes.

Environmental: enhancement of soil health, reduction of carbon emissions, and promotion of regional agricultural production.

Biodiversity: conservation of natural heritage, including endemic species and traditional agricultural practices.

Junior Contato

Farm productive landscape manager

“ The conservation of biodiversity stands as a pillar for maintaining the delicate balance of our ecosystems. Implementing good agricultural practices, creation of Tiny Forests like we have just launched, and engaging in agro-forestry projects are not just actions but a commitment to the future of our planet. These initiatives contribute significantly to preserving biodiversity, ensuring the survival of countless species, and the creation of a harmonious coexistence with nature. The protection of our natural heritage for generations to come. ”
